

## Pipe Recycling: A Complete Success

As early as 1994 the association of plastic pipe manufacturers, Kunststoffrohrverband e.V. (KRV), recognised the signs of the times by establishing a collection and recovery system for plastic pipe waste. Since 2005 KRV has been successfully implementing its new collection and recycling concept for plastic pipes with certified specialist waste disposal companies. For example, KRV has concluded a cooperation agreement with Tönsmeier Kunststoffe GmbH & Co. KG. The company is responsible for the collection, treatment and recovery of plastic pipe waste and every year proves an attested quantity flow of the quantities of incoming materials and recovered materials. Irrespective of members and materials, KRV promotes the material recycling of plastic pipe waste. The system for the collection and recovery of plastic pipe waste is open to all interested companies in the sector.
